# Introduction to SAS

Fred Ullrich Department of Health Management & Policy

#### College of Public Health

Find a seat and log into your computer using your HawkID and password

... "a software suite developed by SAS Institute for advanced analytics, multivariate analyses, business intelligence, data management, and predictive analytics."

# Overview

- Day 1
  - Introduction to SAS
  - Making Changes to Data in SAS
- Day 2
  - Introduction to SAS Procedures
  - ODS Graphics Designer
  - Introduction to SAS EG

## Uses

 Access and manage data across multiple sources

 Generate reports and perform analyses

## Interfaces

- SAS Windowing Environment (SAS)
   Provides a full programming interface
- SAS Enterprise Guide [2] (SAS EG)
  - Provides a point-and-click interface with menus and wizards to create code

# Access at UI

- PC Installation
  - Requires purchase of SAS license

#### Department licenses:

College of BusinessColleCollege of DentistryColleCollege of EducationColleNADs (College of Engineering)IowaCollege of Liberal Arts and SciencesPublic

College of Nursing College of Pharmacy College of Public Health Iowa Consortium of Substance Abuse (VP for Rsrch) Public Policy (VP for Research)

- Virtual Desktop
  - Provides access to a variety of programs through web-based system
  - Used on or off campus

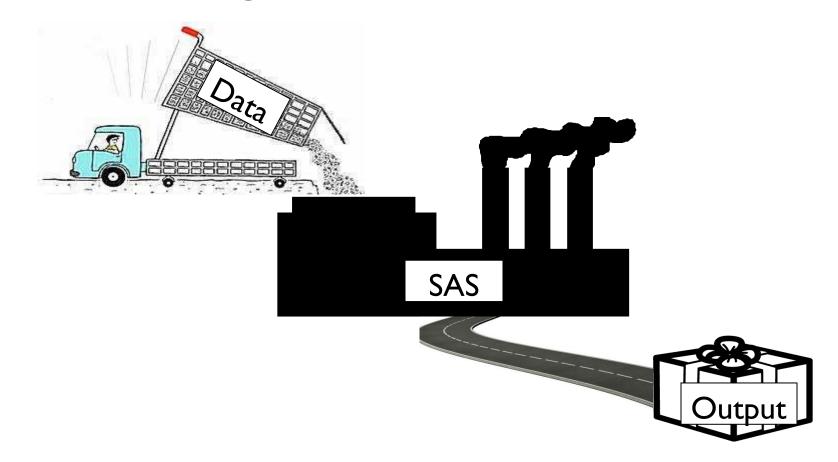

# Starting the SAS System

- Off campus
  - virtualdesktop.uiowa.edu
  - Requires installation of Citrix Receiver software
- PC installed or on campus – Start  $\rightarrow$  All Programs  $\rightarrow$  SAS  $\rightarrow$  SAS 9.4

## It's not magic... it's a tool

# Interface Windows

- Enhanced Editor
- Log
- Output or Results Viewer
- Explorer
- Results

- Provides easy access to SAS files and data sets
- Computer provides access to all shared devices or drives
- Libraries contains all libraries
   currently defined

# **Enhanced Editor**

诺 Editor - Untitled1

- Where you write your SAS programs
- A SAS program is a series of commands to:
  - Import and manipulate data
  - Generate reports and perform analyses
  - Output results

- Information pertaining to the program you've submitted is automatically displayed in the log
- Contains a list of:
  - Program commands and operations
  - Notes, warnings and errors

# **Output or Results Viewer**

🗄 Output - (Untitled)

Results Viewer - SAS Ou...

- When the SAS program executes without error, the results are displayed in the Output or Results Viewer
- The window the results will be displayed in will depend on the default setting

## **Output or Results Viewer**

🔡 Output - (Untitled)

Results Viewer - SAS Ou...

• Output

#### The FREQ Procedure

| Status | Frequency | Percent |
|--------|-----------|---------|
| Alive  | 3218      | 61.78   |
| Dead   | 1991      | 38.22   |

Results Viewer

#### The FREQ Procedure

| Status | Frequency | Percent |
|--------|-----------|---------|
| Alive  | 3218      | 61.78   |
| Dead   | 1991      | 38.22   |

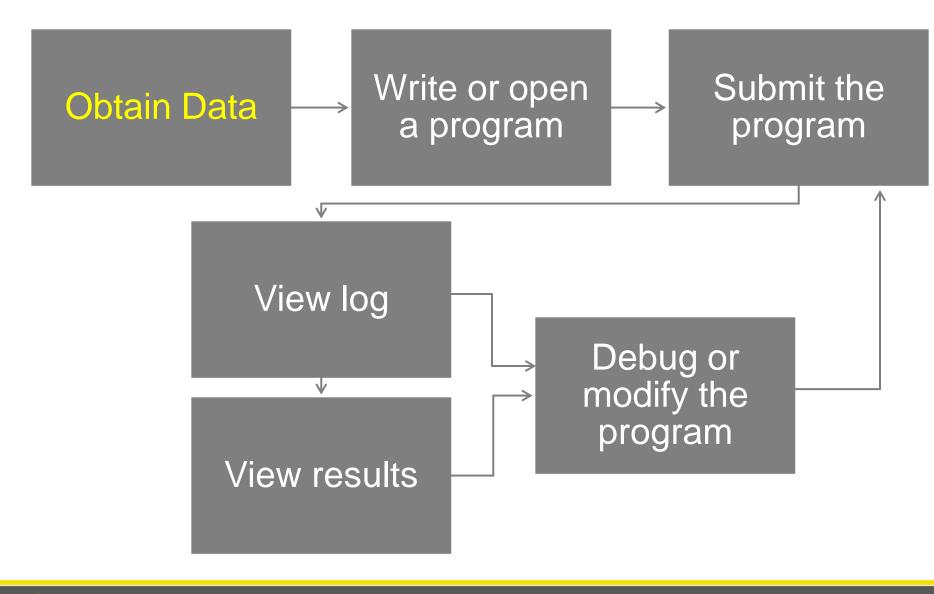

Provides table of contents for output

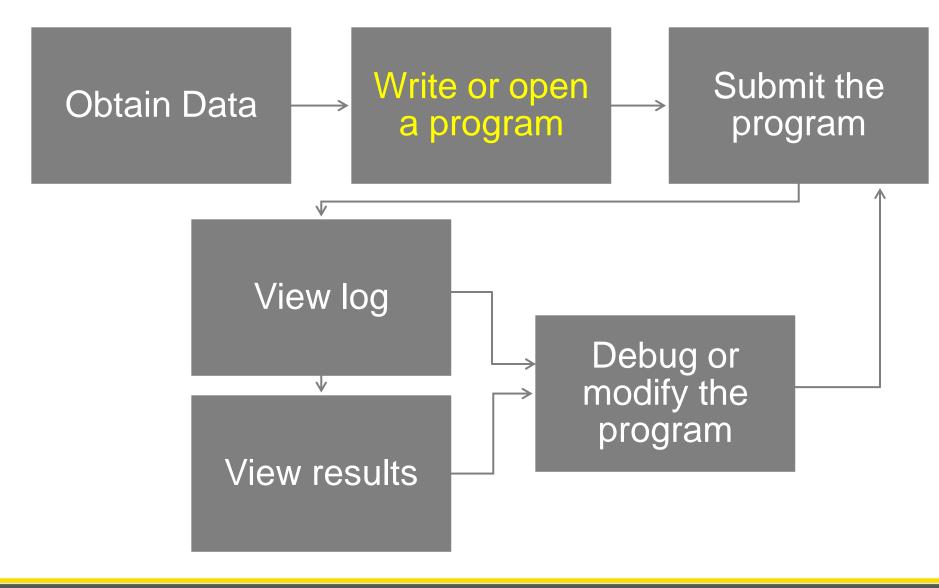

• Lists each procedure in outline form

Can be expanded to show each part

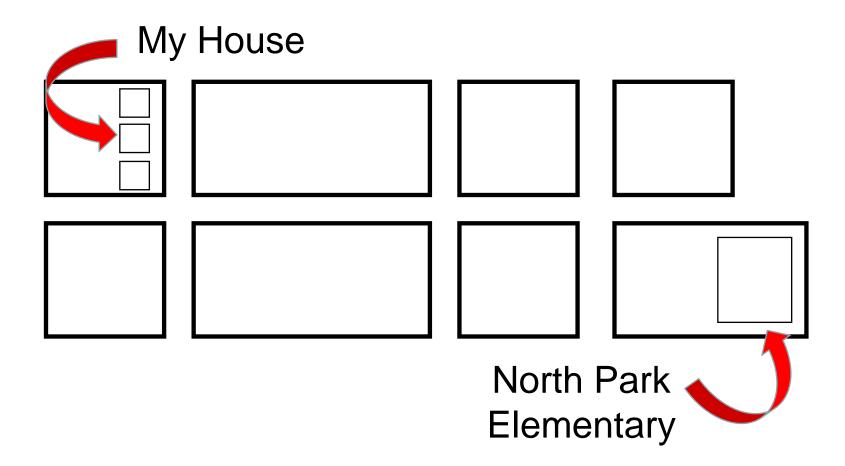

# Becoming a SAS Programmer

- SAS is best as a "write code then run" program
- To be proficient, you must learn how to write a program
  - Simple if you understand what is required

# My First Program

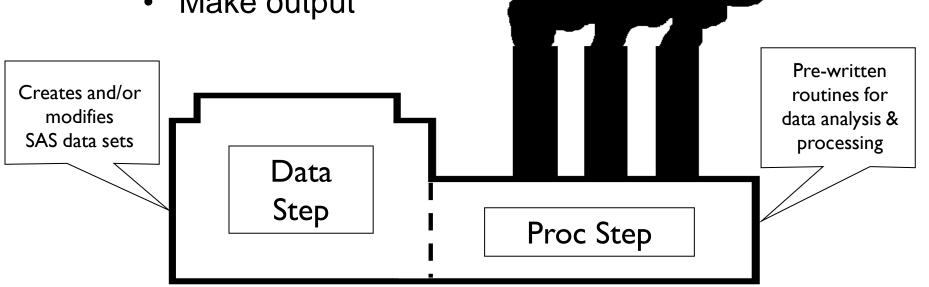

# A Basic SAS Program

- Find data
- Read data
- "Clean" data
- Make output

# A Basic SAS Program

- Find data •
- Read data
- "Clean" data
- Make output

# Data (1)

#### Layout

- Columns = Variables
- Rows = Observations

| Bill | 101 | 55  | 165.10 |
|------|-----|-----|--------|
| Tom  | 156 | 35  | 132.56 |
| Sue  | 204 | 125 | 115.89 |
| Ann  | 245 | 78  | 155.25 |
| Jill | 397 | 32  | 112.90 |
| Bob  | 456 | 44  | 118.21 |
| Tim  | 678 | 67  | 156.20 |
| Matt | 875 | 95  | 134.00 |
| Kay  | 941 | 88  | 122.45 |

# Data (2)

### Variables need names

- 1-32 characters
- Must start with a character or underscore
  - Subsequent characters can be letters, numbers, or underscores
- No blanks or special characters
- Can use any case letters
- Are not case sensitive

| <u>fname</u> | e id | <u>days</u> | wages  |
|--------------|------|-------------|--------|
| Bill         | 101  | 55          | 165.10 |
| Tom          | 156  | 35          | 132.56 |
| Sue          | 204  | 125         | 115.89 |
| Ann          | 245  | 78          | 155.25 |
| Jill         | 397  | 32          | 112.90 |
| Bob          | 456  | 44          | 118.21 |
| Tim          | 678  | 67          | 156.20 |
| Matt         | 875  | 95          | 134.00 |
| Kay          | 941  | 88          | 122.45 |

# Data (3)

### Data types

- Character
  - Can contain any character (letters, numbers, special characters, and blanks)
  - Range from 1-32,767 characters
- Numeric
  - Numbers (decimal point and minus sign)

| <u>fname</u> | e id | <u>days</u> | wages  |
|--------------|------|-------------|--------|
| Bill         | 101  | 55          | 165.10 |
| Tom          | 156  | 35          | 132.56 |
| Sue          | 204  | 125         | 115.89 |
| Ann          | 245  | 78          | 155.25 |
| Jill         | 397  | 32          | 112.90 |
| Bob          | 456  | 44          | 118.21 |
| Tim          | 678  | 67          | 156.20 |
| Matt         | 875  | 95          | 134.00 |
| Kay          | 941  | 88          | 122.45 |

# Data (4)

### Data sources

- Internal
  - Data embedded with a program
- External
  - "Local"
    - Excel, Access, delimited, text
  - "Remote"
    - Databases, servers, etc.

| <u>fname</u> | e id | <u>days</u> | wages  |
|--------------|------|-------------|--------|
| Bill         | 101  | 55          | 165.10 |
| Tom          | 156  | 35          | 132.56 |
| Sue          | 204  | 125         | 115.89 |
| Ann          | 245  | 78          | 155.25 |
| Jill         | 397  | 32          | 112.90 |
| Bob          | 456  | 44          | 118.21 |
| Tim          | 678  | 67          | 156.20 |
| Matt         | 875  | 95          | 134.00 |
| Kay          | 941  | 88          | 122.45 |

| Bill | 101 | 55  | 165.10 |
|------|-----|-----|--------|
| Tom  | 156 | 35  | 132.56 |
| Sue  | 204 | 125 | 115.89 |
| Ann  | 245 | 78  | 155.25 |
| Jill | 397 | 32  | 112.90 |
| Bob  | 456 | 44  | 118.21 |
| Tim  | 678 | 67  | 156.20 |
| Matt | 875 | 95  | 134.00 |
| Kay  | 941 | 88  | 122.45 |
|      |     |     |        |

data demo;

Use the "data" statement to tell SAS that you want to create a dataset and you want to name it "demo".

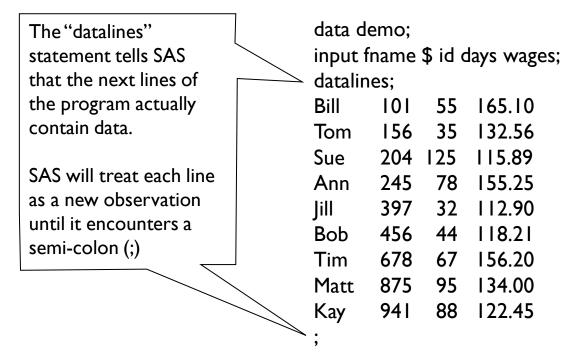

| Bill | 101 | 55  | 165.10 |
|------|-----|-----|--------|
| Tom  | 156 | 35  | 132.56 |
| Sue  | 204 | 125 | 115.89 |
| Ann  | 245 | 78  | 155.25 |
| Jill | 397 | 32  | 112.90 |
| Bob  | 456 | 44  | 118.21 |
| Tim  | 678 | 67  | 156.20 |
| Matt | 875 | 95  | 134.00 |
| Kay  | 941 | 88  | 122.45 |

Use the "input" statement to tell SAS how to read in each line of the data file. This is where you provide variable names and where you tell SAS the type of each variable. data demo; > input fname \$ id days wages;

| Bill | 101 | 55  | 165.10 |
|------|-----|-----|--------|
| Tom  | 156 | 35  | 132.56 |
| Sue  | 204 | 125 | 115.89 |
| Ann  | 245 | 78  | 155.25 |
| Jill | 397 | 32  | 112.90 |
| Bob  | 456 | 44  | 118.21 |
| Tim  | 678 | 67  | 156.20 |
| Matt | 875 | 95  | 134.00 |
| Kay  | 941 | 88  | 122.45 |

The "run" statement isn't always necessary, but it's a good practice to tell SAS that this is the end of the DATA step or PROC step.

data demo; input fname \$ id days wages; datalines; Bill 101 55 165.10 Tom 156 35 132.56 115.89 Sue 204 125 245 155.25 Ann 78 397 112.90 |ill 32 456 118.21 Bob 44 67 156.20 678 Tim 875 Matt 95 134.00 Kay 941 88 122.45 run;

Now that our data is in a SAS dataset, we can run a simple PROC to see what the data looks like.

Again, the "run" statement isn't always necessary, but it's a good practice to tell SAS that this is the end of the DATA step or PROC step.

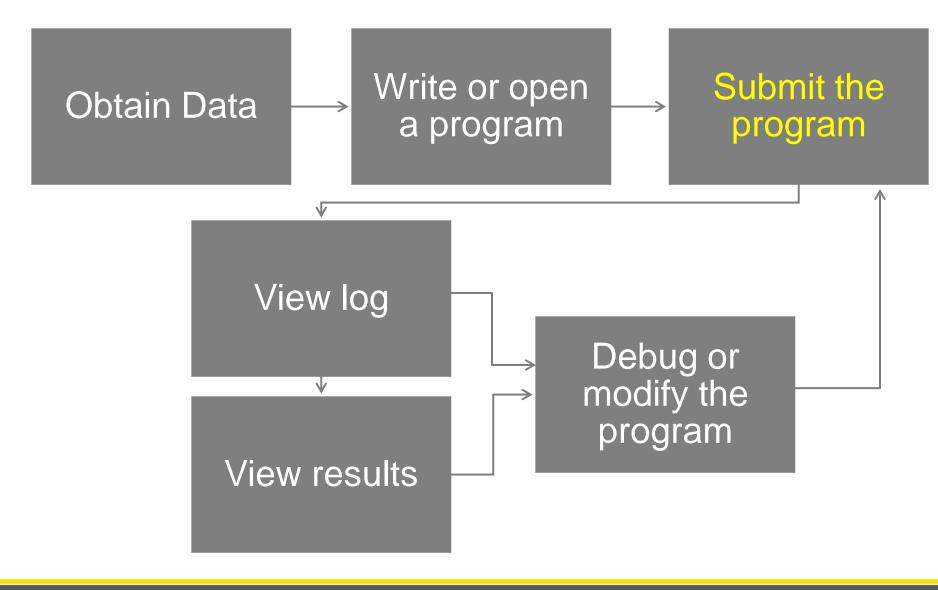

data demo; input fname \$ id days wages; cards; Bill 101 55 165.10 Tom 156 35 132.56 Sue 204 125 115.89 245 Ann 78 155.25 397 |ill 32 112.90 118.21 Bob 456 44 Tim 678 67 156.20 875 95 Matt 134.00 941 88 122.45 Kay

run;

proc print;

run;

# Submitting the Program

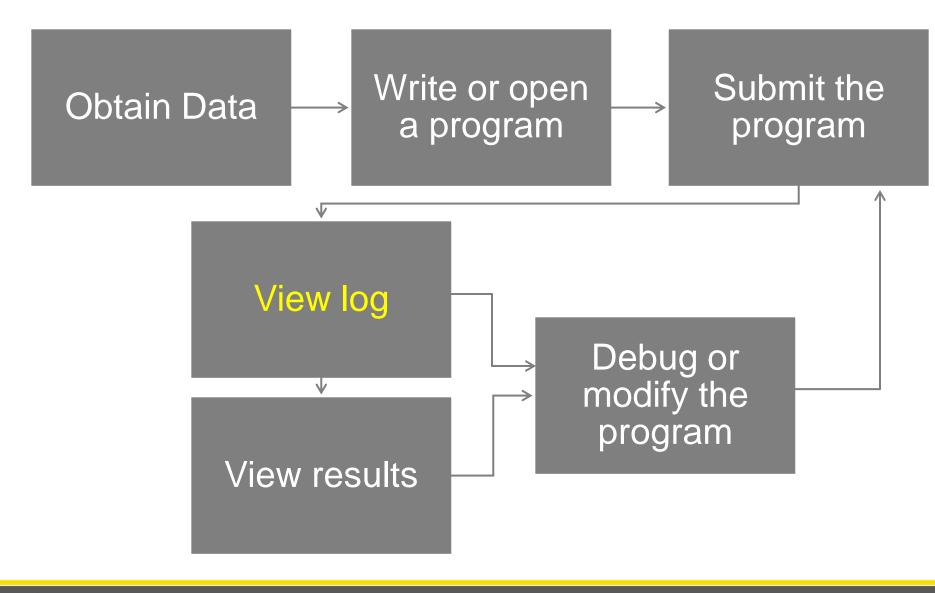

- Can submit all or part of a program
- Click the "running man" \*

# **Results!**

| Obs | fname | id  | days | wages  |

#### Time to do some data fixing!

#### **Assignment Statements**

- Basic method for adding to or modifying a SAS data set
- Has the form Variable=expression;
  - Numeric constant Year=2015;
  - Character constant; Study="Heart";
  - Copy a variable
     Newvariable=Oldvariable;

#### **Arithmetic Calculations**

| Operation      | Symbol | Example                        |
|----------------|--------|--------------------------------|
| Addition       | +      | CholestAdjust=Cholesterol+5;   |
| Subtraction    | -      | SystAdjust=Systolic-10;        |
| Multiplication | *      | Heightm=Height*0.0254;         |
| Division       | /      | BPRatio=SystAdjust/DiastAdjust |
| Exponentiation | **     | Heightm2=Heightm**2            |

#### Let's Write a Program!

Create a new variable named "year" and give it a constant value of 2016.

Then create a new variable named "totwages" that is the product of wages and days.

data demo; input fname \$ id days wages; year=2016; totwages=wages\*days; cards: Bill 101 55 165.10 156 35 Tom 132.56 875 95 134.00 Matt 88 122.45 941 Kay ; run; proc print; run;

## BREAK

#### **Structural Components**

- Every program typically has two parts:
  - DATA step
    - Reading data and variable manipulations
  - PROC step
    - Generates descriptive information and performs statistical analyses

| data demo;<br>input fname \$ id days wages; |     |     |        |  |  |  |  |
|---|-----|-----|--------|--|--|--|--|
| cards;                                      |     |     |        |  |  |  |  |
| Bill  | 101 | 55  | 165.10 |  |  |  |  |
| Tom   | 156 | 35  | 132.56 |  |  |  |  |
| Sue   | 204 | 125 | 115.89 |  |  |  |  |
| Ann   | 245 | 78  | 155.25 |  |  |  |  |
| Jill  | 397 | 32  | 112.90 |  |  |  |  |
| Bob   | 456 | 44  | 118.21 |  |  |  |  |
| Tim   | 678 | 67  | 156.20 |  |  |  |  |
| Matt  | 875 | 95  | 134.00 |  |  |  |  |
| Kay   | 941 | 88  | 122.45 |  |  |  |  |
| •   |     |     |        |  |  |  |  |
| run;  |     |     |        |  |  |  |  |
|   |     |     |        |  |  |  |  |
| proc print;                                 |     |     |        |  |  |  |  |
| run;  |     |     |        |  |  |  |  |

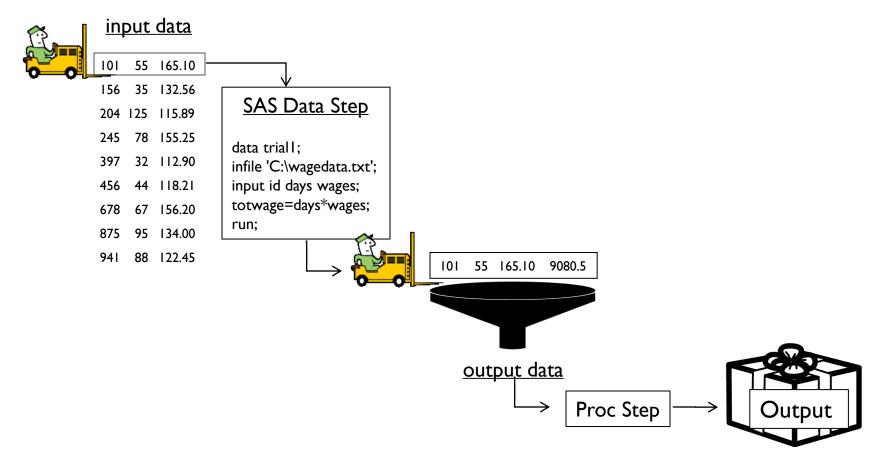

## DATA Step

- Reads and modifies data
  - Arithmetic calculations
  - Recoding variables
  - Combine data sets by concatenation or merging
- Data steps execute line by line and observation by observation

| cards; | 101 |     |        |
|--------|-----|-----|--------|
| Bill   |     | 55  |        |
| Tom    | 156 | 35  | 132.56 |
| Sue    | 204 | 125 | 115.89 |
| Ann    | 245 | 78  | 155.25 |
| Jill   | 397 | 32  | 112.90 |
| Bob    | 456 | 44  | 118.21 |
| Tim    | 678 | 67  | 156.20 |
| Matt   | 875 | 95  | 134.00 |
| Kay    | 941 | 88  | 122.45 |
| ;      |     |     |        |
| run;   |     |     |        |

#### Structure Overview

## **PROC Step**

- Each procedure (PROC) has unique characteristics
- There are lots and lots of PROCs
- PROCs will be covered in more detail tomorrow.

| lanie | φiαc  | lays wage                  |
|-------|---|----------------------------|
| 101   | 55  | 165.10                     |
|       |   |                            |
|       |   |                            |
| -     | -   |                            |
| _     | . –   |                            |
|       |   |                            |
|       |   |                            |
|       |   |                            |
|       |   |                            |
| 941   | 88  | 122.45                     |
|       |   |                            |
|       |   |                            |
|       |   |                            |
| rint; |   |                            |
|       | 156<br>204<br>245<br>397<br>456<br>678<br>875 | 678 67<br>875 95<br>941 88 |

- Read in an "external" data file
  - C:\SASClass\bp.csv
  - Data on clinic and diastolic and systolic blood pressure at initial and follow-up visit.
- CSV: comma-separated values
  - Common data format
  - Easily imported/exported from Excel

| C,84,138,93,143  |
|------------------|
| D,89,150,91,140  |
| A,78,116,100,162 |
| A,,,86,155       |
| C,81,145,86,140  |

---- data bp;

Use the "data" statement to tell SAS that you want to create a dataset and you want to name it "bp".

Use the "infile" statement to tell SAS the name and location of the external data file. Also tell SAS that the data values are delimited with a comma.

data bp; > infile 'c:\sasclass\bp.csv' dlm=',';

Use the "input" statement to tell SAS how to read in each line of the data file. This is where you provide variable names and where you tell SAS the type of each variable. data bp;

infile 'c:\sasclass\bp.csv' dlm=';'; <sup>∽</sup>input clinic \$ dbp1 sbp1 dbp2 sbp2;

Again, the "run" statement isn't always necessary, but it's a good practice to tell SAS that this is the end of the DATA step or PROC step.

Now that our data is in a SAS dataset, we can run a simple PROC to see what the data looks like. data bp; infile 'c:\sasclass\bp.csv' dlm=','; input clinic \$ dbp1 sbp1 dbp2 sbp2; run;

proc print;

run;

# Programs and Outputs and Logs!

(oh my)

#### **Missing Data**

| Obs | clinic | dbp1 | sbp1 | dbp2 | sbp2 |
|-----|--------|------|------|------|------|
| 1   | С      | 84   | 138  | 93   | 143  |
| 2   | D      | 89   | 150  | 91   | 140  |
| 3   |        | 78   | 116  | 100  | 162  |
| 4   | A      | -    | •    | 86   | 155  |

- Character variables ""
- Numeric variables .

# Time to do some (more) data fixing!

"Fix" the record with the missing value for clinic – set it to "B"

Correct the record with the missing dbp2 variable. data bp; infile 'c:\sasclass\bp.csv' dlm=','; input clinic \$ dbp1 sbp1 dbp2 sbp2; → if clinic=' ' then clinic='B'; if dbp2=.Then dbp2=60; run;

proc print; run;

#### "Libraries" and the Libname Statement

- Must submit a libname statement to create a library reference
- Is a pointer to folder on your computer where the data files are stored
- Short hand way of telling SAS where to look for SAS data sets
  - General Format
    - libname <name of library> "<folder location>";
  - Example
    - libname class "H:\SASUsersGroup\datasets\";

#### Libname Rules

- 1-8 characters
- Must start with a letter
  - Subsequent characters can be letters, numbers or an underscore
- No spaces

#### Let's Write more Program!

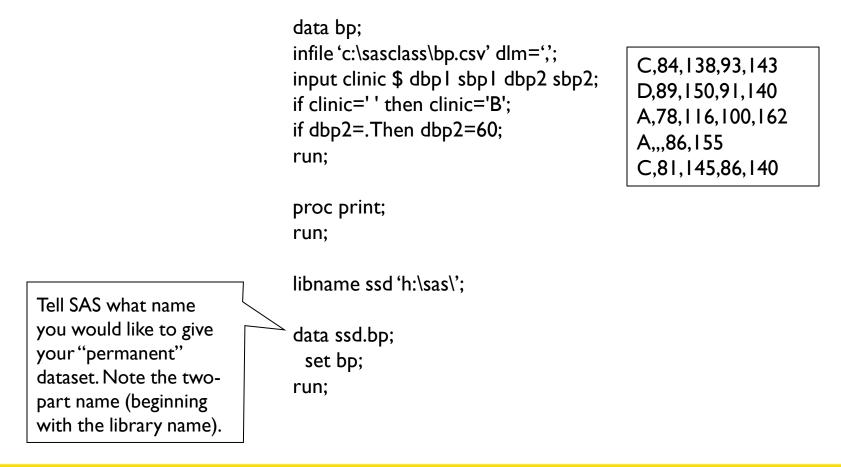

data bp; infile 'c:\sasclass\bp.csv' dlm=','; C,84,138,93,143 input clinic \$ dbp1 sbp1 dbp2 sbp2; D,89,150,91,140 if clinic=' ' then clinic='B'; A,78,116,100,162 if dbp2=.Then dbp2=60; A,,,86,155 run; C,81,145,86,140 proc print; run; libname ssd 'h:\sas\':

Use the "libname" statement to create a library name and to tell SAS where to find that library

data ssd.bp; set bp; run;

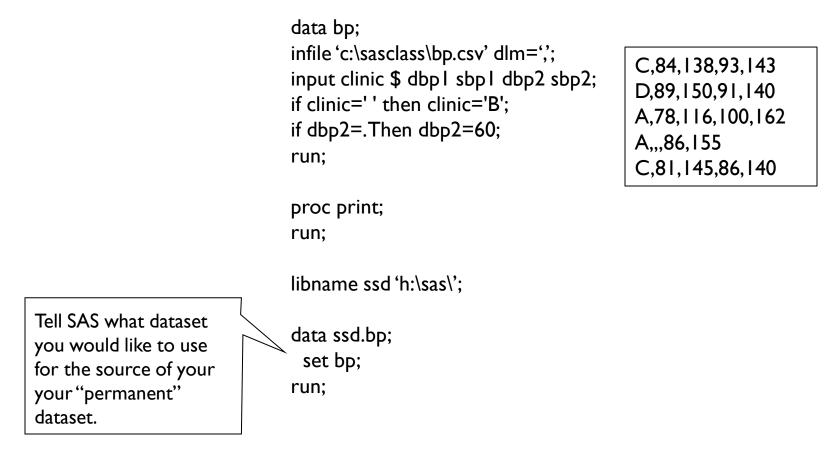

#### Let's Write more Program!

#### Let's Write more Program!

#### **Rules for SAS Statements**

- Begin and end in any column
- Must end with a semicolon (;)
- May consist of more than one line
- Multiple statements may appear on a single line
- One or more blanks should be placed between items
- Unquoted items can be any case

#### **Enhanced Editor**

诺 Editor - Untitled1

Color coded to help you detect errors

| COLOR      | COMMAND TYPE                                     | EXAMPLE                    |
|------------|--|----------------------------|
| BOLD BLUE  | Major SAS commands                               | DATA                       |
| ROYAL BLUE | Sub commands, and recognized SAS words           | INFILE<br>STUDENT          |
| PURPLE     | Words within quotes such as filenames or titles. | 'C:\My Documents\DATA.DAT' |
| BOLD GREEN | Numbers  | 1-20                       |
| GREEN      | Commented out commands                           | *PLOT;                     |
| RED        | Errors   | TALBE                      |
| CALORIES   | All user defined words such as variable names    | CALORIES<br>RESDAT1        |

- Notes
  - Additional information; an indicator of a problem
- Warnings
  - Program still executes but possibly not the way you expected
- Errors
  - Usually the result of a syntax or spelling error

### **Correcting Errors Checklist**

- Read the Log
- Test each part of the program
- Test program using small data sets
- Be observant of the colors in your program

## Common Programming Errors

- No semicolon at the end of a statement
- Missing or mismatched quotation marks
- Misspellings
- Using the letter 'o' instead of number 0

## Correcting DATA Errors

- Data entry errors
  - Descriptive summaries
  - Create flags to alert you of errors
- SAS coding errors
  - Spot check data

- Read in a SAS Dataset
  - C:\SASclass\sample.sas7bdat
  - Data on patients and clinical characteristics.
  - It's already a SAS dataset somebody has already done a lot of the work!

libname ssd 'c:\sasclass\';

Use the "libname" statement to tell SAS to create a library name and to tell SAS where to find that library

libname ssd 'c:\sasclass\';

"LOOK!" A SAS program that doesn't have a data step!

> proc print data=ssd.sample;
run:

Use the "data=" option on the print proc to tell SAS which dataset you want to print.

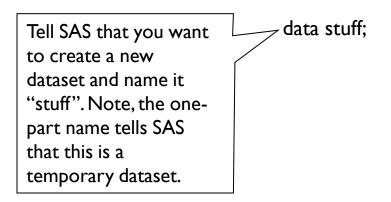

# Time to do some (yet more) data fixing!

libname ssd 'c:\sasclass\';

proc print data=ssd.sample;
run;

libname ssd 'c:\sasclass\';

proc print data=ssd.sample;
run;

Use the "set" data stuff; statement to tell SAS the name of the dataset that you want to use as a "source" for your new dataset.

libname ssd 'c:\sasclass\';

| proc print data=ssd.sample; |
|-----------------------------|
| run;                        |

Use an assignment statement to correct the wacko values for cholesterol. data stuff; set ssd.sample; if cholesterol=999 then cholesterol=.;

libname ssd 'c:\sasclass\';

|   | proc print data=ssd.sample;<br>run;  |
|---|--|
| Use a "run" statement<br>to finish the data step. | data stuff;<br>set ssd.sample;<br>if cholesterol=999 then cholesterol=.;<br>run;<br>proc print data=stuff; |
| Look at the new<br>dataset using a Proc<br>Print. | run;   |

#### Import/Export Data

- SAS can import data from, and export data to, many different formats
  - MS-Excel
  - MS-Access
  - .CSV
  - SPSS
  - Stata
  - many others
- A variety of methods for importing/exporting
- Best approach depends on variety of factors
  - Operating system (Linux, Windows, 32/64-bit)
  - SAS version (9.2, 9.3, 32/64-bit)
  - Originating/destination software (Excel, .csv, SPSS)
- Use the Wizard
  - Be careful, pay attention

#### Import/Export Data (2)
